Gary:

To clarify, the sample was sent prior to the results coming from the Houston Lab. EQ received the combination samples that had a pH of 1.42.

Beth:

EQ should NOT have gotten a sample of STank3 as this has already been resolved by the Houston Lab. It is only a D018 Oily Water Stream. The problem streams right now are STank 1 and 6 which will currently carry the codes (D002(1.25/1.75), D007, D018 plus D020, D030,D032, D033 due to matrix interference). This is the combo stream that EQ should have gotten to evaluate primarily due to the D007 Code. I know you said the pricing for EQ is very good. Can US Ecology take this stream and neutralize and solidify? The volume of the stream is about 6102 gallons based upon our estimates.

Thanks

Yes, I saw the email. The profile for D018 is for South Tank 2 and North Tank 9/10 Comp. I will add the metals data and send it back to you. The D002 profile we completed the other day was for South Tank 7. I have an email into Clean Harbors about the sample review for North Tank 7. South Tank 8 and OT 4 and OT 5 will become non-hazardous once I send Lonestar this lab report. That leaves us with South Tank 1/3/6 which we are splitting up. I will call EQ to see how their review is going for South Tank 3 and we were giving some thought to North Tank 8. I will do my best to see what I can get done for next week.

Beth:

What you sent me is already signed but it shows STank2, and STank9/10 under Lab Analysis under my signature. I don't think this is correct based upon the email you sent me. What do you want me to do? I am ok with you completing this and including the additional data as warranted but you need to send me the fianl so that I can put it in my records.

Also, did you see my forward email from the EPA Houston Lab?

Thanks

Subject: D018 Profile

Gary,

Attached is the D018 profile. I still need to enter the metals information. If you are comfortable signing and letting me do that tomorrow I can keep this going. Otherwise I'm going to need to email this once I've had time to print the metals data off and enter the information. Sorry been a crazy day.

Thanks,

Beth Crawford
